

# Wristband Artwork Guide

Temporary test guide for paper and textile wristbands

Use this guide to prepare artwork for wristband production. This is a temporary test document for website download testing and should be replaced later with the final production template.

## Paper wristbands

Keep all important text, logos and graphic elements inside the safe area. Avoid placing critical details too close to the edges, folds or closure area.

For best results, use clear, high-resolution or vector-based artwork. If numbering is required, please indicate it clearly with the order.

## Textile wristbands

Use simple, clean artwork for the best print result. Avoid extremely small text, very thin lines or overly detailed graphics.

Logos and repeated patterns should be aligned consistently. If numbering is required, please indicate it clearly with the order.

## Before uploading your artwork

- The artwork is final and ready for production.
- Text and logos are placed clearly.
- Important details are not too close to the edges.
- Colours and spelling have been checked.
- Numbering requirements are clearly noted, if needed.

**Note:** This is a sample guide only. Final artwork dimensions and technical requirements should be confirmed before production.
